 TED T. VO
 Primary Examiner

1. The amendment and arguments filed on 09/02/05 have been considered.

The Drawings filed on 07/29/01 are accepted.

Prior arts of record, Duesterwald et al., "Software Profiling for Hot Path Prediction: Less is More", ACM 2000, Conte et al., "Using Branch Handling Hardware to Support Profile-Driven Optimization", ACM, 1994, and Wu et al., "An Efficient Software-Hardware Collaborative Profiling Technique for Wide-Issue Processors", 1999, remain the closet arts in searching.

Reasons for Allowance

2. Claims 1-29 are allowed.

Prior of record, Duesterwald, discloses profile change transition and discusses profiling hardware and sampling. The profile change transition is determined in association with threshold values. Prior of record, Conte, describes arc-based profiling which places thresholds on the programming arcs and records the execution frequency along the arcs. It uses branch prediction hardware to support the profiling. Prior art of record, Wu, discloses using profiling hardware to detect profile information in a program.

Applicants' arguments in the remarks section (filed on 09/02/05) that these prior arts of record fails to teach "signaling profile transitions to a dynamic optimizer by the profiling hardware"; particularly, Applicants pointing out that Wu fails to disclose generating an interrupt signal by hardware when profile transition occurs (limitation in Claim 10). The Applicants' arguments are persuasive.

Therefore, the following is an examiner's statement of reasons for allowance: The cited prior arts taken alone or in combination fail to teach claimed invention comprising at least features,

"signaling profile transitions to a dynamic optimizer by the profiling hardware" as recited in independent Claims 1, 19, and *"a second logic device connected to the profile cache to generate a phase interrupt signal"* as recited in Claim 10.
